ImageJ plugin of MRA/SecMRA deconvolution

1. Introduction

For users' convenience, we release an ImageJ plugin version of the MRA/SecMRA deconvolution software. To run the ImageJ version, please place this .jar file in the plugin folder of your ImageJ. The software can be readily used without the need for any additional installations.

2. Installation

We recommend downloading the ImageJ-stable version instead of the latest version. We found some testing errors when running the MRA plugin in the ImageJ latest version. Simply place the MRA_Deconv-1.0.jar at the “Plugin” folder of the ImageJ software. And then run the plugin in the ImageJ software.

3. Quick guide
